

VORT KRYO POLAR EVO RANGE

NEW

Portable air conditioners

A

“All in one” type air conditioners, available in a cooling only version and a version with a heat pump, which encloses all the devices necessary for operation in a single unit to be housed in the room to be air-conditioned. This feature, combined with the fact that it has no special installation requirements, make it easy to use in different rooms of the house, wherever a need for air conditioning might be felt time to time.

- High efficiency (class A).
- Ecological gas with low environmental impact, R290, characterised by a GWP - Global Warning Potential - that is next to zero, which complies with European Directives on the reduction of the greenhouse effect according to regulation (EU) N°517/2014, annex III, in force since 1 January 2025.
- High performance (up to 12,500 Btu/h).
- "Efficiency Boosting" function, used to significantly increase (15%) the operating efficiency of the products in cooling mode.
- Heat pump (model 13 HP): for optimal usability in the both the cold months and in the summer.

The control panel houses the buttons for product management, indicator lights, display and the infrared sensor for communication with the remote control.

Manual adjustment of the fins located on the front of the product allows for air flow to be directed vertically and horizontally.

The ease and flexibility of use are enhanced by the presence of castor wheels which, coupled with the handles made in the device's chassis, make handling particularly easy and safe.

VORT-KRYO POLAR EVO 11 code 65001.
VORT-KRYO POLAR EVO 13 HP code 65003.

TECHNICAL FEATURES

- 2 models with different cooling capacities.
- Thermoplastic resin ABS enclosure which simultaneously ensures high mechanical resistance and a pleasing aesthetic appearance.
- Compressor which operates with ecological gas R290. To preserve the durability of the compressor, the units are equipped with a special device for instant restart immediately after each shut-down.
- Control panel positioned on the top of the product, housing the activation button for available functions, the indicator lights, display and the infrared sensor for communication with the remote control.
- IR remote control for remote activation.
- Especially complete filter system to ensure improved quality of treated air and to protect internal components. It consists of:
 - Washable dust filters set near the condensing unit air intake grilles. They protect the condensing unit heat exchanger, guaranteeing efficient operation over time.
 - Activated carbon filter serving to remove unpleasant smells from the suctioned air. Not washable and therefore must be replaced periodically when saturated.

All filters are easily accessible to guarantee easy maintenance/replacement.

- 4 operating modes: Automatic, Cooling, Dehumidifying and Ventilation.
- **TIMER** function: allows selection of ON/OFF cycle programming at intervals of 1 hour over a period of 12 hours. Setting the desired duration is very easy and intuitive thanks to the special button located on the control panel, or by using the corresponding button on the remote control.
- **SLEEP** function: optimises energy consumption at night. When set, increases (in cooling mode) and decreases (in heating mode) the initially set temperature by 1°C every 2 hours after selection (via the control panel or remote control).
- Accessories supplied: round adapter (for connection of the hot air exhaust hose to the panel that can be positioned at the window), cover for round adapter, hot air exhaust hose, panel for closing the open area at the window, equipped with round socket, for housing of the exhaust duct, pair of panels for closing the open area at the window, pipe for continuous condensation drainage, activated carbon filter.
- Class of electric isolation: I (earthing required).

IR remote control with ergonomic LCD display for remote control of:
